## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims **1-16** are drawn to a NOR array having NROM cells, classified in class **365**, subclass **94**.
  - II. Claims **17-23** are drawn to a method for reading the bit line storage areas with a close to ground sense amplifier, classified in class **365**, subclass **189.01**.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions **I** and **II** are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the disclosed NOR array can be practiced with different or alternative reading methods without requiring the close to ground sensing approach.
3. Because these inventions are distinct for the reasons given above with recognized divergent subject matter, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
